Earthing & Lightning Protection System

Earthing & Lightning

Over the years, **Axis** has been supplying a wide range of quality products for Earthing and Lightning Protection.

The Earthing and Lightning Protection systems follow International Standards like **BS 6651**, **BS 7430** & **UL 467** and are acknowledged by leading Electrical Distributors and Consultants worldwide. The Products manufactured are easy to install and highly reliable.

The products are produced and tested under stringent **ISO** quality control measures. **Axis** Earthing & Lightning protection systems are being used in core sectors of the economy such as Power, Industrial, Oil and many more.

Protection System

Axis with its professional team keeps in view the clients specific requirements for varied production runs.

The growth of **Axis** is largely due to innovation and continual product development.

This catalogue has been compiled and logically structured enabling the original equipment manufacturers, electrical contractors, distributors, wholesalers and retailers to find product information easily and efficiently.

EARTHING EQUIPMENTS

EARTH RODS

AXIS offers to the customer a complete range of earthing equipments which are best suitable and most economically available.

COPPER BONDED EARTH RODS - SECTIONAL

AXIS earth rods are made from high tensile low carbon steel. Each rod is made by molecularly bonding 99.9 % pure electrolytic copper. Threads on the rods are formed by roll threading process giving extra strength to the threads and eliminating risk of chipping of threads while driving the rod in the ground.

PURE COPPER EARTH ROD (Externally threaded)

AXIS solid copper earth rods are made from high conductivity hard drawn copper. They are ideally suitable where soil conditions are very corrosive, such as soil with high salt and moisture content. These rods are also available with tin plating in order to reduce the risk of oxidation and increasing shelf life. Threads on the rods are formed by roll threading process giving extra strength to the threads and eliminating risk of chipping of threads while driving the rod in the ground.

EARTH RODS

STAINLESS STEEL EARTH ROD (Internal threading)

Stainless Steel earth rods are used to overcome condition of galvanic corrosion which may be caused due to dissimilar metals being buried near by. Solid copper rods are likely to react adversely with the buried metal, thus allowing corrosion to take place. To overcome this situation, stainless steel rods which are more anodic than copper & highly resistant to corrosion are recommended. These rods are manufactured from austenitic stainless steel to BS970, grade 316.

LIGHT WEIGHT EARTH PIT

It is used for light weight application and in areas where small vehicles are used.

Manufactured from High quality polymer. The lid is manufactured out of HDG steel

Description	E - Code
300 x 300	EPP3030

CONCRETE EARTH PIT

The concrete earth pit is used for load ratings upto 4000 Kgs and is suitable for most types of earthing and lightning protection installations.

The Pit can have an earth bar fitted diagonally across in slots provided for multiple connections.

Description	E - Code
300 x 300	CEP3030

EARTHING CONDUCTORS

FLEXIBLE TINNED COPPER BRAID

Manufactured from high conductivity copper wire to BS4109-C101.

Suitable for earth bonding. Also supplied as standard pre-cut & Drilled Bonds.

This is used for bonding of gates, Metal doors, Fences & application where flexibility is required.

BENEFITS OF USING STAINLESS STEEL FASTENERS.

- All SS fasteners are manufactured from non magnetic grade SS 304.
- Highly corrosion resistant.
- No extra surface treatment required for protection against corrosion.
- High tensile strength for better torque ratings to ensure proper functioning of the products.
